

### Abstract of the Disclosure

Crosslinker compositions consisting essentially of 50 to 95 weight percent monomeric C<sub>1</sub> to C<sub>8</sub> alkoxyethyl melamine derivatives containing not more than about 0.20 wt. % of imino (>N-H) groups. Such compositions further comprise 5 to 5 50 weight percent oligomeric C<sub>1</sub> to C<sub>8</sub> alkoxyethyl melamine derivatives and are useful for low temperature curing of functional resins, e.g. with active hydroxyl groups, for wood, automotive, appliance, coil and other coatings.
